Experience

Lsv-tech/Software development

February 2022 - September 2024

- Web and mobile application that allows users to make publications in case of loss and find them, find services for pets. I played a key role in the design and implementation of the backend architecture, which involved creating robust endpoints and defining the models that drove the application. My work directly contributed to a system that connects pet owners to vital services and helps the community reunite with their lost pets, making the app an essential tool for pet lovers.
 - **Backend:** Docker, Python, Django, Rest Framework
 - **Responsibilities:** Architecture Implementation, API Development.
- Platform for enterprise management, formed by several modules for use of calendars, records of incidents, Permissions, statistical data and sending mails.
 - **Backend:** Python, Odoo 13
 - **Responsibilities:** Development in the improvement of modules, implementation of functions, creation of views.
- Developed a dynamic quiz platform, enabling users to solve quizzes while giving administrators to manage users, questions, and rankings. I designed intuitive interfaces for both user and admin experiences, implemented service consumption, ensured path protection, and optimized performance with lazy loading.
 - **Frontend:** Angular, Bootstrap, Angular Design.
 - **Responsibilities:** Design interface for user and administrator, consuming services, path protection, lazy loading
 - **Back end:** Python, Django, Rest Framework
 - **Responsibilities:** Architecture Implementation, API Development.

Freelance/Front-end Development

December 2022 - March 2023

- Front-end Layout Implementation
- **Responsibilities:** Collaborated with designers to translate schematics and mockups into functional, interactive layouts.

Education

Fundación Universitaria Tecnológico Comfenalco

Associate's degree in Software Development Technology

2019 - 2023

Skills

Technical: Python, Django, Rest Framework, Docker, Html, Css, Sass, TypeScript, Angular.
